

## VB-FULLAIR 2C making everyday smoother

• Increased comfort • Better driveability • More safety

**FORD TRANSIT RWD V363** 

>2014 ONLY VAN REAR AXLE

**PRODUCT SHEET** 

## **PRODUCT SHEET**

The Ford Transit RWD V363 is available with a full 2-corner air suspension system for the rear axle. The Transit RWD V363 is an ideal candidate for the use of air suspension systems. Our VB-FullAir 2C air suspension system is not just available for new vehicles, it can also be mounted in used vehicles.

## **VB-FullAir steering**

The VB-FullAir system comes with an electronic control unit called VB-ASCU (VB-Air Suspension Control Unit). This unit automatically monitors and corrects the vehicle's ride height. This ongoing process of monitoring and correction — which is unaffected by the load being transported — ensures safer vehicle handling and increases comfort.

### **Software**

The electronic control unit is compatible with the vehicle electronics and ESC system of the Ford Transit RWD V363. Thanks to the range of different software variants, the VB-FullAir system can be adapted to specific vehicle applications. The use of the Internet helps to provide support across the globe.

## **Changing the height**

The entry/loading platform height can be raised or lowered when the vehicle is at a standstill, allowing passengers to comfortably enter and exit the vehicle and goods to be conveniently loaded and unloaded.
